INDEX

active layer 238, 493
aerodynamic threshold 332
aggradation 491
Airy waves 203
amalgamation 498
angle of climb 505
angular velocity 205
antidunes 357
armor 459
backwater curve 182
barchans 433
bed 497
bed configuration 350
bedding 497
bed-form transport rate 398
bed forms 350
bed load 285, 286, 294
bed phase 350
bed state 350
bed-material load 286
Bernoulli equation 43, 48
boundary layer 53
boundary Reynolds number 109
boundary shear stress 104
brink 355
buffer layer 102
buoyancy 8
burst 150
burst–sweep cycle 150
Chézy coefficient 115
Chézy equation 115
climbing-ripple cross stratification 507
coherent structures 149
combined flow 194
competence 260
conservation of sediment volume 486
continua 2
core region 102
Coriolis acceleration 204
Coriolis effect 204
Coriolis force 204
Coriolis parameter 211
creeping flow 37
critical flow 169
critical shear stress 260
cross bedding 497
cross lamination 497
cross stratification 498
debris flow 490
degradation 491, 496
deposition ratio 491
depth-limited sea 189
differential transport 486
diffusion 15
dimensional analysis 31
displacement height 385
drag 264
drag coefficient 25
drag crisis 74
drag partition 249
dunes 356, 432
dynamic pressure 4
dynamically rough flow 109
dynamically smooth flow 108
eddies 53
eddy diffusion coefficient 116
eddy viscosity 116
Ekman layer 227, 228
Ekman spiral 218
elevation head 165
energy cascade 120
energy grade line 166
energy gradient 166, 179
energy slope 166, 179
equal mobility 460
equation of motion 34
equivalent sand roughness 114, 136
fall velocity 75
fetch 189
flow intensity 285
flow regimes 71, 379
flow resistance 117
flow separation 65, 381
fluid threshold 332
flumes 254
form drag 19, 249
fractional transport rate 459
fractionation 494
free body 7
free stream 53
free surface 84, 157
friction factor 112
friction velocity 109
Froude number 30. 32

geophysical flows 201
geostrophic balance 225
geostrophic motion 225
gradation independence 460
gradually varied flows 178
grain-fall laminae 525
grain flows 304
grain-flow laminae 525
granule ripples 431
gravity waves 201
hairpin vortices 153
head loss 165
hiding–sheltering effect 460
Hjulström diagram 278
horseshoe vortices 153
hummocky cross stratification 518
hydraulic jump 172
hydraulic radius 88
hydrostatic balance 7
hydrostatic equation 6
hydrostatic pressure 6
impact creep 323
impact threshold 332
inertia circle 214
inertia currents 213
inertia period 214
interfacial deposition 489
intermittent suspension load 286
internal boundary layer 64
inviscid flow 40
inviscid fluid 40
isobaric surfaces 221
isobars 224
kinematic viscosity 109
lamina, laminae 497
laminar flows 53
laminar separation 72
lamination 497
law of the wall 123, 131
lee surface 355
lift 264
linear waves 186
load 286, 445
logarithmic layer 142, 235
lower flow regime 379
low-point curve 503
Magnus effect 330
mass deposition 488
mixed layer 232, 233
momentum function 175
Navier–Stokes equation 35
nominal diameter 238
nonlinear waves 186
normal depth 180
open-channel flow 83, 157
oscillatory waves 186
outer layer 102
overlap layer 141
overloading 483
partial transport 478
particle-weight effect 460
pathline 44
pavement 459
Pi theorem 34
Pinstripe laminae 515
planar bed surface 357
planar stratification 531
planetary boundary layer 230
pocket 296
pressure 3
pressure drag 19
pressure head 165
pure drift currents 215
rapidly varied flows 178
reattachment 381
reference transport rate 471
relative height 186
relative roughness 112, 194
reptation 323
resistance diagram 113
Reynolds numbers 22, 32, 54
Reynolds-number similarity 120
Reynolds stress 96
rheological layer 305
rib and furrow 511
ripple crest 355
ripple trough 355
ripples 355
Robins effect 330
rollability effect 460
Rossby number 212
Rouse number 310
roughness element 130
roughness length 139
roughness Reynolds number 109
saltation 286, 306, 321
scale modeling 23
sediment 237

sediment conservation equation 400–402
sediment discharge 445
sediment-discharge formulas 453
sediment transport rate 445
selective entrainment 459, 478
separation vortex 382
settling 483
settling velocity 75
shear layer 381
shear stress 12
shear velocity 109
Shields curve 273
Shields diagram 273
Shields parameter 267
size fraction 457
skimming flow 149
skin friction 249
slip face 355
sorting 239, 457
specific energy 165
specific head 165
specific weight 9
specific-energy diagram 167
specific-head diagram 167
spectral waves 190
splash function 339
stagnation point 42
static pressure 4
steady flow 83
Stokes' law 38
stoss surface 355
stratification 497
stratified flows 157
stratum, strata 497
streakline 44
streamline 44
stream tube 44
structure 497
subcritical flow 169
supercritical flow 169
surface creep 323
susceptibility 328
suspended load 285, 286
suspension 307
sweep 150
terminal velocity 75
texture 497
threshold shear stress 260
total head 165
traction 307
traction carpet 305
transitionally rough flow 109
translatent laminae 525
translatory waves 186
transport stage 289
truncation surface 498
turbidity current 490
turbulence 48
turbulence closure problem 98
turbulence-dominated region 103
turbulence-generation layer 102
turbulent diffusion 93
turbulent separation 72
turbulent shear flow 99
turbulent shear stress 96
two-dimensional wave spectrum 190
two-phase flow 241
uniform flow 83, 160
unit sediment transport rate 456
upper flow regime 379
velocity defect law 130
velocity head 165
viscosity 10
viscosity-dominated region, 103
viscous drag 19
viscous length scale 110
viscous sublayer 100
von Kármán's constant 127
vortex ripples 438
vorticity 53, 150
wake 61, 67
wake-interference flow 148
wash load 285, 286
wave boundary layer 190
wave friction factor 194
wave steepness 186
wave–current boundary layer 211, 215
wavelets 201
wind ripples 431
zero-plane displacement 385
