

MITOCW | 1. What is your aim in teaching this class?

MICHAEL PRINCE:I'd say that my aim with audio and speaker building isn't really to teach anything but more to give the students a sense of how the things they're learning in school, like the physics, and the math, the calculus, and that sort of thing, how those things are useful and fun in the real world. And, I mean, we do that by building speakers.
